

Pacific Regional Visitor Center

Exhibits • Interpretive Services • Educational Outreach

U.S. Army Corps of Engineers

What is the Pacific Regional Visitor Center?

The primary purpose of the RVC program is to provide interpretive services and outreach education to the visiting public about the story of the U.S. Army Corps of Engineers (Corps).

Exhibits, interpretive services and outreach education are designed to stimulate interest and convey information on water resources planning and environmental stewardship. Planning and environmental stewardship calls for a holistic watershed approach and integrates the ahupua'a concept, historic conditions, current issues and future possibilities with our partners to create a sustainable future. Projects comply with Federal, State and local environmental laws and regulations to restore project sites, reduce flooding, prevent environmental impacts such as pollution and habitat destruction, and conserve and protect the long-term availability of natural and cultural resources at project sites.
