APPROVED JURISDICTIONAL DETERMINATION FORM U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

- A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): September 8, 2016
- B. DISTRICT OFFICE: Honolulu District, Guam Regulatory Field Office (CEPOH-RO) FILE NAME: AJD Lot 1475 & 1476, Hagatna, Guam FILE NUMBER: POH-2016-00200

C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State/Territory: Guam Village/City: Hagatna (Agana) Center coordinates of site (lat/long in degree decimal format): Lat. 13.48798 ° N, Long. 144.7549 °W Universal Transverse Mercator: N/A Name of nearest waterbody: Hagatna River Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Pacific Ocean Name of watershed or Hydrologic Unit Code (HUC): 22010000

- Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

- ☑ Office (Desk) Determination. Date: September 8, 2016
- Field Determination. Date(s): N/A

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required]

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: N/A

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are no "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

1. Waters of the U.S.

a. Indicate presence of waters of U.S. in review area (check all that apply): ¹

- TNWs, including territorial seas
- Wetlands adjacent to TNWs
- Relatively permanent waters² (RPWs) that flow directly or indirectly into TNWs
- Non-RPWs that flow directly or indirectly into TNWs
- Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- Impoundments of jurisdictional waters
- Isolated (interstate or intrastate) waters, including isolated wetlands

¹ Boxes checked below shall be supported by completing the appropriate sections in Section III below.

² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

b. Identify (estimate) size of waters of the U.S. in the review area:

Non-wetland waters: N/A; no waters or wetlands on the two subject lots, all determined to be uplands. Wetlands: N/A; no waters or wetlands on the two subject lots, all determined to be uplands.

c. Limits (boundaries) of jurisdiction based on: Not Applicable

Elevation of established OHWM (if known): N/A

2. Non-regulated waters/wetlands (check if applicable):³

Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: N/A; no jurisdictional waters and/or wetlands identified on the subject property. The two lots are uplands.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: N/A

Summarize rationale supporting determination: N/A

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent": N/A

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody⁴ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

- 1. Characteristics of non-TNWs that flow directly or indirectly into TNW
 - (i) General Area Conditions: Watershed size: # Choose an item. Drainage area: # Choose an item.

Average annual rainfall: # inches Average annual snowfall: # inches

(ii) Physical Characteristics:

- (a) <u>Relationship with TNW:</u>
 - Tributary flows directly into TNW.

³ Supporting documentation is presented in Section III.F.

⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

Tributary flows through *Choose an item*. tributaries before entering TNW.

	Project waters are <i>Choose an item.</i> river miles from TNW. Project waters are <i>Choose an item.</i> river miles from RPW. Project waters are <i>Choose an item.</i> aerial (straight) miles from TNW. Project waters are <i>Choose an item.</i> aerial (straight) miles from RPW. Project waters cross or serve as state boundaries. Explain: <i>Click here to enter text.</i> Identify flow route to TNW ⁵ : <i>Click here to enter text.</i>								
	Tributary stream order, if known: <i>Click here to enter text</i> .								
(b)	General Tributary Characteristics (check all that apply):								
	Tributary is:	Natural							
		Artificial (man-made). Explain: <i>Click here to enter text.</i>							
	Manipulated (man-altered). Explain: <i>Click here to enter text</i> .								
	Tributary properties with respect to top of bank (estimate): Average width: # feet Average depth: # feet Average side slopes: <i>Choose an item</i> .								
	Primary tributary	substrate compos	sition (check all tha	t app	ly):				
	Silts		Sands			Concrete			
	Cobbles		Gravel			Muck			
	Bedrock	с 🗌	Vegetation. Type	e/% c	over: Click here to) enter text.			
	 Other. Explain: <i>Click here to enter text.</i> Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: <i>Click here to enter text.</i> Presence of run/riffle/pool complexes. Explain: <i>Click here to enter text.</i> Tributary geometry: <i>Choose an item.</i> Tributary gradient (approximate average slope): #% 								
(c)	 Flow: Gributary provides for: Choose an item. Estimate average number of flow events in review area/year: Choose an item. Describe flow regime: Click here to enter text. Other information on duration and volume: Click here to enter text. 								
	Surface flow is: Choose an item. Characteristics: Click here to enter text.								
	 Subsurface flow: <i>Choose an item.</i> Explain findings: <i>Click here to enter text.</i> Dye (or other) test performed: <i>Click here to enter text.</i> Tributary has (check all that apply): Bed and banks OHWM⁶ (check all indicators that apply): clear, natural line impressed on the bank in the presence of litter and debris 								
	Chan	iges in the charac	cter of soil	Γ	destruction of te	errestrial vegetation			
	shelv	ving		\Box	the presence of	wrack line			
			wn, bent, or absent		sediment sorting	g			
	-	litter disturbed of	r washed away	\square	scour				
		ment deposition		Γ	-	ed or predicted flow events			
	wate	er staining		\Box	abrupt change in	n plant community Click here to enter text.			

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

⁶A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

other (list): *Click here to enter text.*

Discontinuous OHWM.⁷ Explain: *Click here to enter text.*

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- High Tide Line indicated by:
 - oil or scum line along shore objects
- survey to available datum;

physical markings;

Mean High Water Mark indicated by:

- fine shell or debris deposits (foreshore)
- vegetation lines/changes in vegetation types.

- tidal gauges
- other (list): *Click here to enter text.*

physical markings/characteristics

(iii) Chemical Characteristics:

Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.). Explain: *Click here to enter text.*

Identify specific pollutants, if known: Click here to enter text.

(iv) Biological Characteristics. Channel supports (check all that apply):

- Riparian corridor. Characteristics (type, average width): *Click here to enter text.*
- Wetland fringe. Characteristics: *Click here to enter text.*

Habitat for:

- Federally Listed species. Explain findings: *Click here to enter text.*
- Fish/spawn areas. Explain findings: *Click here to enter text.*
- Other environmentally-sensitive species. Explain findings: *Click here to enter text.*
- Aquatic/wildlife diversity. Explain findings: *Click here to enter text.*

2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW

(i) Physical Characteristics:

- (a) General Wetland Characteristics:
 - Properties:

Wetland size: # acres Wetland type. Explain: *Click here to enter text.* Wetland quality. Explain: *Click here to enter text.* Project wetlands cross or serve as state boundaries. Explain: *Click here to enter text.*

(b) General Flow Relationship with Non-TNW:

Flow is: Choose an item. Explain: Click here to enter text.

Surface flow is: *Choose an item*.

Characteristics: *Click here to enter text*.

Subsurface flow: Choose an item. Explain findings: Click here to enter text.

- Dye (or other) test performed: *Click here to enter text.*
- (c) <u>Wetland Adjacency Determination with Non-TNW:</u>
 - Directly abutting
 - Not directly abutting
 - Discrete wetland hydrologic connection. Explain: *Click here to enter text.*
 - Ecological connection. Explain: Click here to enter text.
 - Separated by berm/barrier. Explain: *Click here to enter text.*

(d) Proximity (Relationship) to TNW

Project wetlands are *Choose an item.* river miles from TNW.
Project waters are *Choose an item.* aerial (straight) miles from TNW.
Flow is from: *Choose an item.*Estimate approximate location of wetland as within the *Choose an item.* floodplain.

(ii) Chemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: *Click here to enter text.*

Identify specific pollutants, if known: Click here to enter text.

(iii) Biological Characteristics. Wetland supports (check all that apply):

- Riparian buffer. Characteristics (type, average width): *Click here to enter text.*
- Vegetation type/percent cover. Explain: *Click here to enter text.*
- Habitat for:
 - Federally Listed species. Explain findings: *Click here to enter text.*
 - Fish/spawn areas. Explain findings: Click here to enter text.
 - Other environmentally-sensitive species. Explain findings: *Click here to enter text.*
 - Aquatic/wildlife diversity. Explain findings: *Click here to enter text.*

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: *Choose an item*. Approximately (#) acres in total are being considered in the cumulative analysis. For each wetland, specify the following:

Directly abuts? (Y/N)	Size (in acres)	Directly abuts? (Y/N)	Size (in acres)
Y/N	#	Y/N	#
Y/N	#	Y/N	#
Y/N	#	Y/N	#
Y/N	#	Y/N	#

Summarize overall biological, chemical and physical functions being performed: Click here to enter text.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

- 1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: *Click here to enter text.*
- 2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: *Click here to enter text.*

- 3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: *Click here to enter text.*
- D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):
 - 1. TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
 - TNWs: # linear feet # width (ft), Or, # acres.
 - Wetlands adjacent to TNWs: # acres.
 - 2. RPWs that flow directly or indirectly into TNWs.
 - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: *Click here to enter text*.
 - Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: *Click here to enter text*.

Provide estimates for jurisdictional waters in the review area (check all that apply):

- Tributary waters: *#* linear feet *#* width (ft).
- Other non-wetland waters: # acres.
- Identify type(s) of waters: *Click here to enter text*.

3. Non-RPWs⁸ that flow directly or indirectly into TNWs.

Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional waters within the review area (check all that apply):

- Tributary waters: # linear feet # width (ft).
- Other non-wetland waters: # acres.

Identify type(s) of waters: *Click here to enter text*.

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

- Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: *Click here to enter text.*
- Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: *Click here to enter text.*

Provide acreage estimates for jurisdictional wetlands in the review area: # acres.

- 5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.
 - Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetlands in the review area: # acres.

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetlands in the review area: # acres.

7. Impoundments of jurisdictional waters.⁹

- As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.
- Demonstrate that impoundment was created from "waters of the U.S.," or
- Demonstrate that water meets the criteria for one of the categories presented above (1-6), or

⁸See Footnote # 3.

⁹ To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.

Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):¹⁰

- which are or could be used by interstate or foreign travelers for recreational or other purposes.
- from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- which are or could be used for industrial purposes by industries in interstate commerce.
- Interstate isolated waters. Explain: *Click here to enter text.*
- Other factors. Explain: Click here to enter text.

Identify water body and summarize rationale supporting determination: Click here to enter text.

Provide estimates for jurisdictional waters in the review area (check all that apply):

- Tributary waters: # linear feet # width (ft).
- Other non-wetland waters: # acres.

Identify type(s) of waters: Click here to enter text.

Wetlands: # acres.

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
 - Prior to the Jan 2001 Supreme Court decision in "*SWANCC*," the review area would have been regulated based <u>solely</u> on the "Migratory Bird Rule" (MBR).
- Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: *Click here to enter text.*
- Other: (explain, if not covered above): *Click here to enter text.*

Provide acreage estimates for non-jurisdictional waters in the review area, where the <u>sole</u> potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non-wetland waters (i.e., rivers, streams): # linear feet # width (ft).
- Lakes/ponds: # acres.
- Other non-wetland waters: # acres. List type of aquatic resource: *Click here to enter text*.
- Wetlands: # acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters (i.e., rivers, streams): # linear feet # width (ft).
- Lakes/ponds: # acres.
- Other non-wetland waters: # acres. List type of aquatic resource: *Click here to enter text*.
- Wetlands: # acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where

checked and requested, appropriately reference sources below):

- Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Wetland Delineation Summary email dated September 2, 2016 submitted by Mr. Joel Sablan of ARC Environmental Services.
- Data sheets prepared/submitted by or on behalf of the applicant/consultant: Dataform supporting upland determination dated August 31, 2016.

¹⁰ Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA *Memorandum Regarding CWA Act Jurisdiction Following Rapanos*.

- Office concurs with data sheets/delineation report: Wetland Delineation Report dated August 15, 2016 and revised datasheets dated August 18, 2016
- Office does not concur with data sheets/delineation report.
- Data sheets prepared by the Corps: *Click here to enter text*.
- Corps navigable waters' study: *Click here to enter text*.
- U.S. Geological Survey Hydrologic Atlas:
 - USGS NHD data: No hydrologic features on NHD; checked via ORM2 on September 8, 2016
 - USGS 8 and 12 digit HUC maps: HUC: 2001000
- Alaska District's Approved List of Navigable Waters
- U.S. Geological Survey map(s). Cite scale & quad name: 1:24K Hagatna, GU (2000)
- USDA Natural Resources Conservation Service Soil Survey.
- National wetlands inventory map(s). Cite name: N/A; no wetlands mapped; checked via ORM2 on September 29, 2016
- State/Local wetland inventory map(s): *Click here to enter text.*
- FEMA/FIRM maps: *Click here to enter text.*

- [100-year Floodplain Elevation is: Click here to enter text. (National Geodectic Vertical Datum of 1929)
- Photographs: 🔽 Aerial (Name & Date): 1994 Aerial photo provided by the consultant shows evidence of a former dwelling on the subject property.
 - or Other (Name & Date): Click here to enter text.
- Previous determination(s). File no. and date of response letter: Click here to enter text.
- Applicable/supporting case law: *Click here to enter text*.
- Applicable/supporting scientific literature: *Click here to enter text.*
- Other information (please specify): *Click here to enter text.*

B. ADDITIONAL COMMENTS TO SUPPORT JD:

The Honolulu District, U.S. Army Corps of Engineers Guam Regulatory Field Office reviewed all of the information (see file) provided by Mr. Joel Sablan of ARC Environmental Services received via email on September 2, 2016. Mr. Sablan conducted a wetland assessment of two small parcels, Lot #1475 (0.064-acre) and Lot #1476 (0.076-acre) in Hagatna, Guam. The on-site investigation revealed that there were no wetlands and/or waters of the U.S. on the subject parcels.

The subject lots are located east of a narrow access behind Fast Copy and Family Finance in Hagatna, Guam. The lots were thoroughly explored by Mr. Sablan and found he the remnants of an old house with septic/cesspool system (water at approximately minus 4FT), concrete and tin, a water line and remnants of a retaining wall separating it from the adjacent property to the east. The lots were on average 2 FT above the parcels to the east and south and appeared to have been filled in the past. The fill edge neatly coincides with property boundaries as identified by the project surveyor. The lots were dominated by *Hibiscus tiliaceus* (FACW) and invasive species such as *Epiremnum aureum* (Devil's vine) (FACW) and *Syngonium angustatum* (Arrow vine) (FAC). These vines substantially cover site vegetation including a single mango tree. Barking frogs and inundation were present to the south of the site.

A datapoint was taken toward the SE portion of the property where it appeared lowest and adjacent to the ponded property to the south (see photos, Enclosure 1). The soil was quite dry for rainy season and was interspersed with rocks and coral fragments and contained moderate amount of sand. The soil would not form a ribbon when wet. This lowest point failed the screening for a wetland point as both soil and hydrology requirements were not met (refer to data sheet). A historical photo showing a roof line of where the old house was can be seen in Enclosure 1. It was assumed that based on the site conditions, that these lots were probably filled in the 1950s-1960s for home development. The site was considered to be under normal conditions, obviously given the age of fill, and there was no significant disturbances.

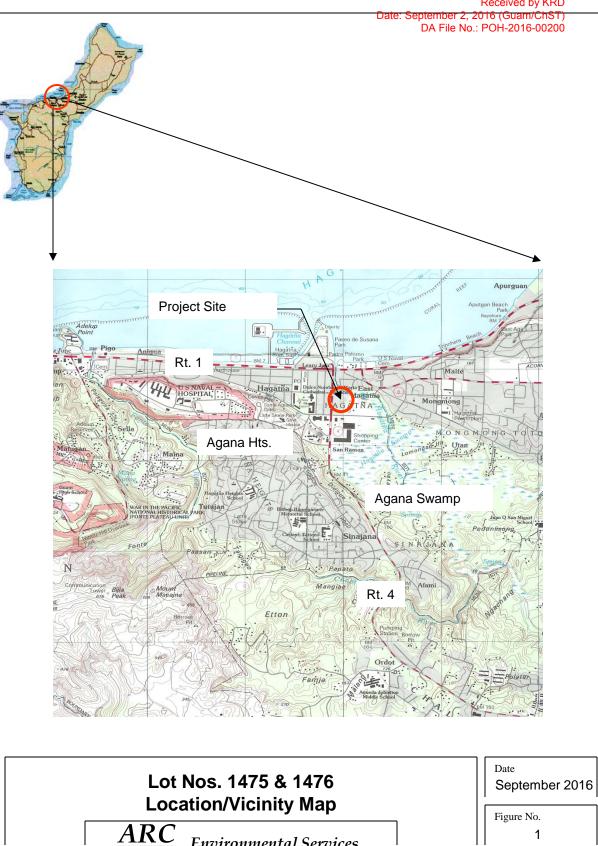

Therfore, based upon review of the wetland delineation summary, the National Wetlands Inventory (NWI), and the National Hydrography Dataset (NHD), the Corps has concluded that the subject parcel does not contain any jurisdictional waters of the U.S, including wetlands.
